Strengthify

Installation guide for Google Chrome

Strengthify is a free Chrome extension that tells you how strong a password is while you type it. It shows **Weak**, **Medium** or **Strong** on any website. It works offline, needs no account, and your password is never stored or sent anywhere.

Use a computer. Browser extensions can't be installed from a phone. If you opened this guide on your phone, send the link to your computer and follow the steps there. Total time: about 2 minutes.

How to install

1 Download Strengthify

- On the GitHub page, click the green **Code** button.
- Click **Download ZIP**.
- Wait for the file (for example **strengthify-extension-main.zip**) to finish downloading.

2 Unzip the folder

- **Windows:** right-click the ZIP file, click **Extract All**, then click **Extract**.
- **Mac:** double-click the ZIP file.
- Move the unzipped folder somewhere you will keep it, such as Documents. **Do not delete or move it after installing**, because Chrome loads the extension from this folder.
- Inside it, find the folder named **ext**. You need it in Step 4.

3 Open the Chrome Extensions page

Type this in the address bar and press Enter:

```
chrome://extensions
```

4 Turn on Developer mode and load the folder

- Turn on **Developer mode** (the switch at the top right).
- Click **Load unpacked** (top left).
- Find the unzipped folder and select the folder named **ext** (the one that contains **manifest.json**).
- Click **Select Folder** (Windows) or **Select** (Mac).

Strengthify now appears in your list of extensions.

5 Pin it to your toolbar (optional)

- Click the **puzzle piece** icon next to the address bar.
- Click the **pin** icon next to Strengthify.

6 Reload your open tabs

Extensions only work on pages opened after you install them. Refresh any tabs that were already open, or open a new one.

How to use it

On any website: click a password box and start typing. A small shield badge appears inside the box and a card appears beside it showing **Weak**, **Medium** or **Strong**.

- Press **Esc** or click the **x** to hide the card.
- Click the shield badge to show or hide it again.

To test a password without a website: click the Strengthify icon in your toolbar and type a password in the box.

Result	What it means
Weak	Easy to guess. Choose a different password.
Medium	Okay, but a longer or less predictable one is better.
Strong	Hard to guess. Use a different strong password for each site.

Privacy

- Strengthify reads only password boxes, nothing else on the page.
- Your password is checked inside your browser and is never stored, logged or sent over the internet.
- It asks for no special browser permissions.
